Profile Summary

Frontend-focused Full Stack Engineer with **3+ years of experience** building high-traffic, B2B web applications using **React**, **Next.js**, and modern state management patterns. Currently developing a **travel-based SaaS platform** serving multi-company tourism operations, with strong ownership of UI architecture, performance optimization, and user experience. Proven ability to deliver scalable, maintainable frontend solutions in Agile, cross-functional teams.

Core Skills

- React / Next.js
- TypeScript / JavaScript
- Redux Toolkit / RTK Query
- Tailwind CSS / MUI
- UI Architecture
- Performance Optimization
- Formik / Complex Forms
- Responsive Design
- Node.js
- PostgreSQL / MongoDB
- Azure
- Git / Agile

Work Experience

Professional Experience

Full Stack Engineer (Frontend Lead)

Jan 2025 – Feb 2026

Meridian Creative Solutions

- Own frontend architecture and delivery for **Explor.App**, a **B2B travel and itinerary management platform** supporting multiple tourism companies and distributed teams.
- Designed and scaled a **Next.js + React** frontend with role-based access, enabling consistent UX across sales, operations, and traveler-facing flows.
- Built a **drag-and-drop itinerary builder** using **dnd-kit**, reducing itinerary creation time by **60%** and enabling non-technical users to assemble complex trip plans.
- Integrated **Google Maps API** for route visualization, activity locations, and day-wise base planning, significantly improving trip clarity and traveler engagement.
- Implemented centralized state management using **Redux Toolkit + RTK Query**, cutting redundant API requests by **40%** and improving UI consistency.
- Developed high-traffic, multi-step forms with **Formik**, improving data accuracy and form completion rates across booking and itinerary workflows.
- Delivered traveler-facing features including **live itinerary sharing links**, **PDF exports**, accommodation summaries, and transport views.
- Took end-to-end ownership of UI features, including testing, bug fixing, and production issue resolution in a fast-paced Agile environment.

Associate Software Engineer

Jul 2024 – Oct 2024

Maxfinity Pvt. Ltd.

- Contributed to **70%+ of the frontend implementation** for an ad-posting SaaS platform using **React**, accelerating feature delivery by **40%**.
- Improved application performance by implementing **lazy-loaded routes**, reducing initial load time by **30%**.
- Adopted **RTK Query** for scalable data fetching, improving network efficiency by **25–50%** and reducing boilerplate code.

- Built responsive, mobile-first UI components using **Tailwind CSS**, increasing usability and engagement across devices.
- Streamlined form handling and validation with **Formik**, reducing form-related errors by **25%**.

Software Engineer Intern
ITX360 Pvt. Ltd., Colombo

Jul 2023 – Jan 2024

- Worked on an **AI-powered document management system** (XTrack), improving document processing efficiency by **25%**.
- Built frontend features using **React**, **Redux Toolkit**, and **MUI**, reducing UI development time by **30%**.
- Developed backend services with **ASP.NET Core** and **CQRS**, improving data handling performance by **20%**.
- Integrated **PostgreSQL** and deployed cloud services on **Azure**, improving reliability and scalability.

Selected Projects

AlphaRise – High-Performance Discipline Tracker

2026

Architected and developed a comprehensive B2C discipline and personal progress tracking platform utilizing Next.js (App Router), React, TypeScript, and Supabase. Engineered an advanced metrics engine utilizing Moving Averages (MA) to calculate real-time daily performance scores, strictly implementing the nullish coalescing operator to flawlessly handle potential null values in complex data visualizations via Recharts. Designed a highly secure, end-to-end encrypted mindset journaling system using AES-256-GCM encryption with a custom key versioning mechanism. Implemented an automated, client-side report generation utility using jsPDF to export dynamic, heavily styled PDF summaries.

Tech: Next.js, React, TypeScript, Supabase, jsPDF, Recharts

Links: Live Demo

AlphaFormat – LinkedIn Personal Branding Tool

2026

Architected a highly optimized, server-rendered web utility using Next.js 16 (App Router) and React 19, strategically isolating static UI from interactive client components to maximize initial load performance. Engineered a robust, type-safe text processing engine in TypeScript, utilizing an O(N) bit-offset mapping algorithm to dynamically translate standard characters into Unicode mathematical alphanumeric symbols. Designed a scalable frontend architecture incorporating CSS Modules, pure functional utilities, and the React Compiler for advanced client-side efficiency and seamless cross-platform formatting.

Tech: Next.js 16, React 19, TypeScript, React Compiler, Unicode Algorithms, CSS Modules

Links: Live Demo — GitHub

Recipe App (MERN Stack)

2024

Built a scalable MERN application with secure **JWT authentication** and efficient data fetching using **RTK Query**.

Link: Frontend, Backend

Education

Bachelor of Computer Science
University of Ruhuna, Sri Lanka

2020 – 2024

Professional Qualification

Comprehensive Master Java Developer Diploma
Institute of Software Engineering (IJSE)

2020
